PROFESSIONAL SUMMARY

Results-driven AI/ML & Python Developer with 5 years of experience building scalable cloud applications, automating complex data workflows, and delivering ML-powered solutions. Core expertise in designing end-to-end Generative AI architectures, advanced OCR pipelines, and containerized microservices (AWS EKS, FastAPI). Proven track record of leveraging multi-model LLM orchestration (Claude, GPT, Azure) to drive high-impact business value, backed by strong foundations in robust CI/CD practices (Tekton, ArgoCD) and system optimization.

WORK EXPERIENCE

AI/ML Engineer | Python Developer

Accenture Solutions Pvt Ltd. Feb 2022 - Present

- Architecting an end-to-end Generative AI and OCR pipeline for a leading global healthcare client, automating bulk extraction of complex claims documents.
- Integrated Claude, GPT, and Azure Document Intelligence with sophisticated LLM orchestration to achieve 68% data extraction accuracy on unstructured data.
- Deployed containerized Python microservices on Amazon EKS with automated CI/CD pipelines using Tekton and ArgoCD.
- Designed scalable APIs using FastAPI and AWS Lambda, integrating DynamoDB for high-throughput, low-latency distributed workloads.
- Engineered a bulk loader with AWS Lambda for massive dataset ingestion into Amazon Neptune, optimizing graph-based data modeling.
- Created advanced Gremlin queries reducing data retrieval times by 30%, enabling faster analytical workflows.
- Migrated to AWS Secrets Manager for secure credential retrieval, enhancing compliance and system security.

Software / Web Developer

Forms9 Jul 2021 - Jan 2022

- Built an end-to-end Inventory Management System using Django, automating operator workflows and reducing manual tracking errors by 40%.
- Implemented automated web scraping solutions using Python (BeautifulSoup, Selenium) to extract real-time data from external platforms (e.g., NSE), integrating into Excel reports.
- Deployed on Linux server using Nginx & Gunicorn with strict security measures including IP restrictions and VPN-only access.

PROJECTS

Karseva (Progressive Web App)

Developed a PWA using Python, Django, and AWS to foster intergenerational connections, enhancing elderly care. Awarded the ACE Award by Accenture.

Inventory Management System

Built a comprehensive inventory platform using Django that streamlined stock control and improved data accuracy by 40%.

Bill Management System

Designed a secure billing platform with Django, focusing on transaction efficiency, rapid query times, and Razor Pay integration.
