PROFESSIONAL SUMMARY

Results-driven AI/ML & Python Developer with 5 years of experience building scalable cloud applications, automating complex data workflows, and delivering ML-powered solutions. Core expertise in designing end-to-end Generative AI architectures, advanced OCR pipelines, and containerized microservices (AWS EKS, FastAPI). Proven track record of leveraging multi-model LLM orchestration (Claude, GPT, Azure) to drive high-impact business value, backed by strong foundations in robust CI/CD practices (Tekton, ArgoCD) and system optimization.

TECHNICAL SKILLS

Languages & Scripting: Python, SQL, JavaScript, HTML, CSS, Regex, Markdown

AI/ML & Data Processing: Generative AI, Large Language Models (Claude, GPT), Azure Document Intelligence (OCR), OpenAI APIs, AWS SageMaker

Cloud & DevOps: AWS (EKS, Lambda, S3, EC2), Azure, Docker, Kubernetes, Tekton, ArgoCD, Git

Frameworks & Libraries: FastAPI, Django, BeautifulSoup, Selenium

Databases: DynamoDB, Amazon Neptune (Graph DB), MongoDB, Aurora DB, Gremlin

Tools & Security: AWS Secrets Manager, Okta, Bruno, Nginx, Gunicorn, Pytest

WORK EXPERIENCE

Accenture Solutions Pvt Ltd.

AI/ML Engineer – Python Developer

Mumbai, India

02/2022 – Present

- Serve as a core team member architecting an end-to-end Generative AI and OCR pipeline for a leading global healthcare client, automating the bulk extraction and processing of highly complex claims documents.
- Integrated advanced AI models, including Claude, GPT, and Azure Document Intelligence, utilizing sophisticated LLM orchestration to achieve a 68% data extraction accuracy milestone on entirely unstructured data formats.
- Architected and deployed scalable, containerized Python microservices on Amazon Elastic Kubernetes Service (EKS), establishing robust automated CI/CD pipelines utilizing Tekton and ArgoCD for seamless continuous delivery.
- Designed and deployed highly scalable APIs using FastAPI and AWS Lambda, integrating DynamoDB to enable high-throughput, low-latency data access across distributed workloads.
- Engineered a high-performance bulk loader with AWS Lambda to efficiently ingest massive datasets into Amazon Neptune, optimizing graph-based data modeling.
- Created advanced Gremlin queries to traverse complex Neptune graph data, successfully reducing data retrieval times by 30% and enabling faster analytical workflows.
- Upgraded legacy architecture by migrating to AWS Secrets Manager for secure credential retrieval, significantly enhancing compliance and system security.
- Proactively troubleshooted and resolved critical production issues, leveraging deep debugging and performance profiling to ensure system uptime and data integrity.

Forms9

Software/Web Developer

Mumbai, India

07/2021 – 01/2022

- Built an end-to-end Inventory Management System using Django, which automated operator workflows and reduced manual tracking errors by 40%.
- Designed and implemented automated web scraping solutions using Python (BeautifulSoup, Selenium) to extract real-time livestock and product data from external platforms (e.g., NSE), integrating data pipelines directly into comprehensive Excel reports.
- Deployed the application on a Linux server utilizing Nginx and Gunicorn, while implementing strict security measures including IP restrictions and VPN-only access.

PROJECTS & ACHIEVEMENTS

Karseva (Progressive Web App): Developed a PWA utilizing Python, Django, and AWS to foster intergenerational connections, enhancing elderly care and community engagement through innovative user experiences. *Awarded the ACE Award by Accenture for delivering this innovative solution.*

Inventory Management System: Built a comprehensive inventory platform using Django that streamlined stock control and improved data accuracy by 40%.

Bill Management System: Designed a secure billing platform focused on transaction efficiency, rapid query times, and data integrity using Django.

EDUCATION

Bachelor of Technology in Computer Science
Mumbai University

07/2017 – 06/2021
CGPA: 7.1
